

We should be able to access the services we desire to use without being restricted or preventing us from being able to get or call other companies.. The hearing people can subscribe long distance carrier and still make any calls to other people who subscribe from other long distance as well as local.. Why can't we be open to call Sorenson/DLINK without blocking.. There are so many things out there that has no blocking because that's our right and that blocking services should be removed..

Thanks
